Hello,

since Metra has announced the purchase of 15 EMD SD70MAC locomotives from Progress Rail, and published the first mock-up of one using Metra branding and numbering (numbered 500), I'd like to know the new road numbers Metra intends to apply to each individual loco, and each locos former identity, as I keep a record of all locos running in passenger service in the USA, which includes all current and previous identities.

Is this something you have available yet?

Many thanks,

Damian Clement
